

## PSK HANDBOOK 7

# PIPE CLASSES

Both parts of the handbook form a comprehensive toolkit for efficient piping design and provide necessary information for procurement of piping.

The 6<sup>th</sup> edition of the handbooks contains all the pipe class standards prepared by PSK Standards Association (PSK Standardisointi).

- Part 1 – Stainless steels
- Part 2 – Carbon steels

The pipe classes in handbook 7 are particularly suitable for use in the process industry and power plants in piping governed by Pressure Equipment Directive. An extensive collection of pipe classes for different pressure levels has been prepared for each steel grade.

Pipe classes are based on EN standards, they guide design into uniform practices and provide guidance on the procurement of piping.

PSK handbook 7 *Pipe classes, part 1 and 2* together with PSK handbooks 8 *Pipe supporting* and 9 *Industrial insulations* form the basic standards for piping design. All these handbooks are bilingual (Finnish and English).

PSK Standards Association workgroup

## PSK 42/5

The standards for both parts of the book have been developed by PSK Standards Association's workgroup PSK 42/5, which has been represented by experts in the fields of piping design, manufacturing, inspection bodies, technical trade, suppliers and contractors.

Working group PSK 42/5 and its predecessors have prepared and developed pipe class standards since 1983.
